

2022-2023

This is the 10th anniversary of the course, that involve tools and die for metal forming process. This time, a lancing process is chosen. The lancing process combines two or more processes, either shearing, bending, and forming or shearing and bending only. There are various profiles that can be produced via the lancing process. The methods is like previous years, where groups of students need to design, model, fabricate and test the developed tooling.

One of the die produced.
