

YEAR 2021/2022

This year, the project is about sheet metal bending. 10 groups involve this time and each of them need to select a sheet part that produced by bending process. As usual, when involve fabrication, many incidents happen, rework, redesign and replan which most likely can avoided. At the end of the semester, they need to test their tooling and evaluate their designed tooling based on the produced part. After curriculum review, the course is now offer with 3 unit.

Tooling trial

Every features were tested

Before and after bending part, compared to reference product.
